COOPERIFY

Cooperative Society Management Platform

Product Requirements Document (PRD)

Version	1.0
Date	April 2026
Status	Draft — For Review
Audience	Product, Engineering, Design, Stakeholders

1. Executive Summary

Cooperify is a multi-tenant, web-based automation platform purpose-built for cooperative society administrators (cooperators). It enables a single cooperator to manage multiple cooperative societies from one unified interface — tracking member contributions, generating reports, and maintaining full financial transparency across every society under their care.

The platform addresses a widespread gap in the cooperative sector: most societies still rely on spreadsheets, paper ledgers, or fragmented tools. Cooperify replaces these with a structured, auditable, and extensible digital system.

1.1 Problem Statement

Cooperative societies — credit unions, thrift societies, savings groups, and similar member-owned financial organisations — typically track member contributions manually. This results in:

- High risk of data errors, loss, and fraud due to manual record-keeping
- No real-time visibility into members' financial positions
- Inability to generate timely, accurate reports for audits or AGMs
- Cooperators who manage multiple societies struggling with context-switching between separate, incompatible records
- Lack of year-on-year contribution history per member per financial category

1.2 Proposed Solution

A centralised web platform where cooperators log in once and manage all their societies. Each society contains its full member roster; each member has a detailed monthly contribution ledger covering all standard financial categories — with the flexibility to add custom categories per society.

1.3 Success Metrics

Metric	Target	Measurement Method
Cooperator onboarding time	< 10 minutes	Time-to-first-society
Data entry time per member/month	< 2 minutes	In-app session analytics
Report generation time	< 30 seconds	System benchmark
Data accuracy vs. manual records	> 99.5%	Audit comparison

2. Users & Roles

2.1 Primary Users

Role	Who They Are	Core Needs
Cooperator (Admin)	Elected or appointed society manager	Manage multiple societies, enter monthly contributions, generate reports
Society Member (View Only)	Individual member of a cooperative	View personal contribution history, balances, loan status
Super Admin	Platform administrator	Manage cooperator accounts, platform health, audit logs

2.2 User Personas

Persona A — Adaeze, The Busy Cooperator

Adaeze manages 4 cooperative societies across her organisation. Every month she manually updates spreadsheets for ~300 members spread across all societies. She spends 2–3 full days on data entry and is perpetually worried about formula errors. She needs a system that lets her enter data fast, catch mistakes early, and export a clean report for each society's secretary.

Persona B — Emeka, The Member

Emeka is a member of the NITEL Staff Cooperative. He wants to verify that his monthly savings deductions are being recorded correctly without having to call Adaeze or attend a meeting. He needs a simple read-only view of his contribution history and current balances.

3. Platform Architecture Overview

3.1 Multi-tenancy Model

Cooperify uses a hierarchical multi-tenancy structure:

Level	Entity	Description
L1	Platform	Cooperify itself — the top-level system managed by Super Admins
L2	Cooperator Account	A cooperator's workspace — owns all their societies
L3	Society	An individual cooperative entity with its own members and settings
L4	Member	Individual within a society with financial records
L5	Contribution Record	Monthly financial entries per member per category

3.2 Core Modules

- Authentication & Access Control — login, role management, 2FA
- Society Management — CRUD operations for societies
- Member Management — CRUD operations for members within a society
- Contribution Ledger — monthly data entry per member per financial category
- Custom Categories — extensible category system per society
- Reporting & Export — PDF/Excel exports, year-end summaries
- Audit Trail — immutable logs of all data changes
- Dashboard & Analytics — visual summaries for cooperators

4. Feature Requirements

4.1 Authentication & Onboarding

FR-AUTH-01: Cooperator Registration

- Email and password registration with email verification
- Profile creation: full name, phone number, organisation name
- Terms of service acceptance

FR-AUTH-02: Login & Security

- Email/password login with session management
- Optional Two-Factor Authentication (TOTP/SMS)
- Password reset via email
- Role-based access control (RBAC) enforced at API level

4.2 Society Management

FR-SOC-01: Society List Dashboard

The cooperator's home screen after login. Displays:

- All societies managed by the cooperator in a card or table view
- Key stats per society: total members, total savings balance, active loans count
- Quick-action buttons: Enter Monthly Data, View Members, Generate Report
- Search and filter by society name or status

FR-SOC-02: Create / Edit Society

- Fields: Society Name, Registration Number (optional), Type (thrift/credit union/multipurpose/custom), Description, Financial Year Start Month, Currency
- Logo upload (optional)
- Active / Inactive status toggle

FR-SOC-03: Society Settings

- Configure active financial categories for that society
- Set default contribution amounts or targets per category
- Configure loan interest calculation method (flat rate / reducing balance)
- Custom category management (see Section 4.5)

4.3 Member Management

FR-MEM-01: Member List

- Paginated, searchable list of all members in a society
- Columns: Member ID, Full Name, Phone, Email, Join Date, Status, Outstanding Loan
- Filter by status (active/inactive/suspended)
- Bulk import via CSV template

FR-MEM-02: Member Profile

- Personal details: name, member number, phone, email, date of birth, employment info
- Photo upload
- Guarantors (for loan eligibility)
- Full contribution history tab — all months, all categories
- Loan history tab
- Summary cards: Total Savings, Total Shares, Active Loans, Total Loan Interest Paid

4.4 Monthly Contribution Ledger — Core Feature

FR-LED-01: Standard Financial Categories

Every member in every society has the following standard monthly fields:

Category Key	Display Name	Description
savings	Monthly Savings	Regular monthly thrift/savings deduction
shares	Share Subscriptions	Monthly equity share purchase contribution
loans	Loan Repayment	Amount repaid toward outstanding loan principal
loans_interest	Loan Interest	Interest charged/paid on active loans that month
building_funds	Building Fund	Levy toward society building or property acquisition
special_savings	Special Savings	Earmarked savings for a specific purpose (e.g. Christmas levy)

FR-LED-02: Monthly Data Entry View

The primary data-entry screen. Design requirements:

- Select Society → Select Month → Select Year to load the contribution table
- Spreadsheet-like grid with members as rows, categories as columns
- Tab/Enter key navigation between cells for fast keyboard entry
- Each cell accepts a numeric value in the society's configured currency
- Row-level totals calculated and displayed automatically
- Unsaved changes indicator; auto-save draft every 30 seconds
- Bulk-fill: fill an entire column with the same value in one action
- Mark entry as finalised (locked) to prevent accidental edits
- Visual indicator if a cell has been modified since last save

FR-LED-03: Contribution History View

- Per-member view: 12-month grid for any selected year, all categories
- Society-wide view: aggregate totals per category per month
- Year-to-date running totals
- Multi-year comparison view (current year vs. prior year)

4.5 Custom Categories — Extensibility

FR-CAT-01: Custom Category Creation

Each society may define additional financial categories beyond the six standard ones:

- Field: Category Name (e.g. Welfare Levy, Development Fund, Education Grant)
- Field: Description / Purpose
- Field: Data Type — Amount (numeric) | Yes/No (boolean) | Text (free-form note)
- Field: Applies From — choose the year/month this category becomes active
- Field: Target Amount — optional monthly target for this category per member
- Toggle: Is this category compulsory or voluntary?
- Toggle: Include in member total balance calculations?

FR-CAT-02: Category Management

- Reorder categories in the data-entry grid via drag-and-drop
- Deactivate a category (preserves historical data, hides from future entry)
- Archive categories with a reason

4.6 Reporting & Export

FR-REP-01: Report Types

Report Name	Description	Formats
Monthly Statement	All members' contributions for a selected month	PDF, Excel
Annual Summary	Full-year breakdown per member per category	PDF, Excel
Member Statement	Individual's full contribution history	PDF
Loan Register	All active/closed loans with repayment schedules	PDF, Excel
Balance Sheet Summary	Society-wide totals per category	PDF, Excel
Deduction Schedule	Payroll-ready export for employer deductions	Excel, CSV

5. Non-Functional Requirements

Category	Requirement	Acceptance Criteria
Performance	Page Load	< 2s on 3G; data-entry grid < 1s on broadband
Scalability	Concurrency	Support 500+ concurrent cooperators without degradation
Security	Data Isolation	Zero cross-tenant data leakage; RBAC enforced at DB level
Security	Encryption	TLS 1.3 in transit; AES-256 at rest for financial data
Availability	Uptime SLA	99.5% monthly uptime; maintenance windows off-peak
Auditability	Audit Log	Immutable, tamper-evident log of all data writes with user/timestamp
Accessibility	WCAG 2.1 AA	Screen-reader compatible; keyboard-navigable data entry
Mobile	Responsive	Fully usable on mobile; data-entry grid adapts to small screens

6. Data Model (Logical)

6.1 Core Entities

Entity	Key Fields	Relationships
CooperatorAccount	id, email, name, org, plan_tier, created_at	Has many Societies
Society	id, cooperator_id, name, reg_no, type, currency, year_start_month, status	Belongs to CooperatorAccount; Has many Members, Categories
Member	id, society_id, member_no, name, email, phone, dob, join_date, status	Belongs to Society; Has many ContributionRecords
Category	id, society_id, key, name, type (amount/boolean/text), is_standard, is_active, target_amount	Belongs to Society; Has many ContributionValues
ContributionRecord	id, member_id, society_id, month, year, is_finalised, created_by, updated_at	Belongs to Member; Has many ContributionValues
ContributionValue	id, record_id, category_id, value, note	Belongs to ContributionRecord and Category
AuditLog	id, user_id, action, entity_type, entity_id, old_value, new_value, timestamp, ip	Linked to all mutable entities

7. User Stories & Acceptance Criteria

7.1 Epic: Society Management

US-001 — View My Societies

As a cooperator, I want to see all cooperative societies I manage on my dashboard so I can quickly navigate to any of them.

Acceptance Criteria:

- Dashboard loads within 2 seconds of login
- Each society card shows: name, member count, and last updated date
- I can search societies by name
- I can create a new society from this screen

US-002 — Create a New Society

As a cooperator, I want to create a new society so I can begin tracking its members and contributions.

Acceptance Criteria:

- Creation form validates all required fields before submission
- Society appears on my dashboard immediately after creation
- Standard financial categories are pre-configured by default

7.2 Epic: Member Management

US-003 — Add a Member to a Society

As a cooperator, I want to add a new member to a society so I can start recording their contributions.

Acceptance Criteria:

- Member is assigned a unique member number automatically
- Member appears in the society member list immediately
- I can optionally upload the member's photo

US-004 — Bulk Import Members

As a cooperator, I want to import a list of members from a CSV file so I can onboard large groups efficiently.

Acceptance Criteria:

- System provides a downloadable CSV template
- Import preview shows a validation summary before committing
- Errors are reported row-by-row with clear descriptions
- Successful rows are imported even if some rows fail

7.3 Epic: Contribution Ledger

US-005 — Enter Monthly Contributions

As a cooperator, I want to enter each member's financial contributions for a given month so that records are up to date.

Acceptance Criteria:

- I can select any month and year to enter or edit data
- The grid shows all active members as rows and all active categories as columns
- Pressing Tab moves focus to the next cell; Enter moves to the cell below
- Changes are auto-saved every 30 seconds as a draft
- I can finalise a month's data to lock it from further edits
- A finalised month can be unlocked with a reason (audit logged)

US-006 — Add a Custom Category

As a cooperator, I want to add a custom financial category to my society so that I can track unique levies or funds beyond the standard fields.

Acceptance Criteria:

- I can name the category, set its type (amount/yes-no/text), and define a target
- The custom category appears in the data-entry grid for all future months
- I can choose whether historical months should show the category (blank) or not

8. Future Scope & Roadmap

Phase	Feature	Description
v1.0	Core Platform	All features described in this PRD (MVP)
v1.1	Member Self-Service Portal	Members log in to view their own contribution history and statements
v1.2	Loan Management Module	Full loan lifecycle: application, approval, disbursement, repayment schedule, interest calculator
v1.3	Mobile App (PWA)	Progressive Web App for offline data entry; sync when reconnected
v2.0	Inter-Society Transfers	Member transfers between societies managed by the same cooperator
v2.1	Payroll Integration	API connector for payroll systems to auto-import deductions monthly
v2.2	AGM Report Pack	One-click generation of all reports required for Annual General Meetings
v3.0	AI Insights	Anomaly detection, contribution trend forecasting, defaulter early-warning

9. Open Questions & Decisions Needed

1. Pricing Model: Will Cooperify be priced per cooperator account, per society, or per member? Freemium vs. subscription?
2. Data Residency: Should financial data be stored in-country (e.g., Nigeria)? Are there regulatory requirements?
3. Offline Support: Is an offline-capable PWA required for v1.0 or can it be deferred to v1.3?
4. SMS Notifications: Should members receive SMS alerts when contributions are posted? This has cost implications.
5. Loan Module Scope: Should basic loan tracking (balance + repayment) be in v1.0 or deferred?
6. Audit Unlock Policy: Who has authority to unlock a finalised month — only the super admin, or any cooperator?
7. Currency Support: Multi-currency from day one, or single-currency (NGN) for v1.0?
